

Engineering

Stephanie Packard

I picked to do Engineering because engineering is a big part of my life, especially computer engineering, which is what I chose to do. When I get older, I want to go into computer engineering and I thought that this would be a good place to start and learn more about it. 4-H also helped me get more hands-on experience with things in computer engineering along with getting other people's help on what I need to be doing better. In 4-H I have learned a lot, even though I've only been a member for a year. You have to be able to get along with people if you're going to do anything competitively. If you can't get along with people, and you get upset because of something, you may look like a sore loser or something of the sort, and you don't want that to happen.

Hints and tips for people who are choosing to do Engineering: I would say to pick something that you know a lot on already, or something you want to know more about. I chose to do a PowerPoint on how much children are staying on the computer and the internet. I'm on the internet a lot, and I was interested in knowing how much time children were spending on the computer as compared to doing other things. This was something I was interested in, and was therefore an easy subject for me to do research on. So, pick something you like, it makes things a lot easier.
